- Overview
- Seuic MDM Solution
- Features
- Input & Output

With the continuous development of digitalization, IoT technology will be more and more widely used.

In the era of IoT + Big Data + Cloud Computing, traditional device mgmt. methods cannot meet the requirements of enterprises for refined mgmt.

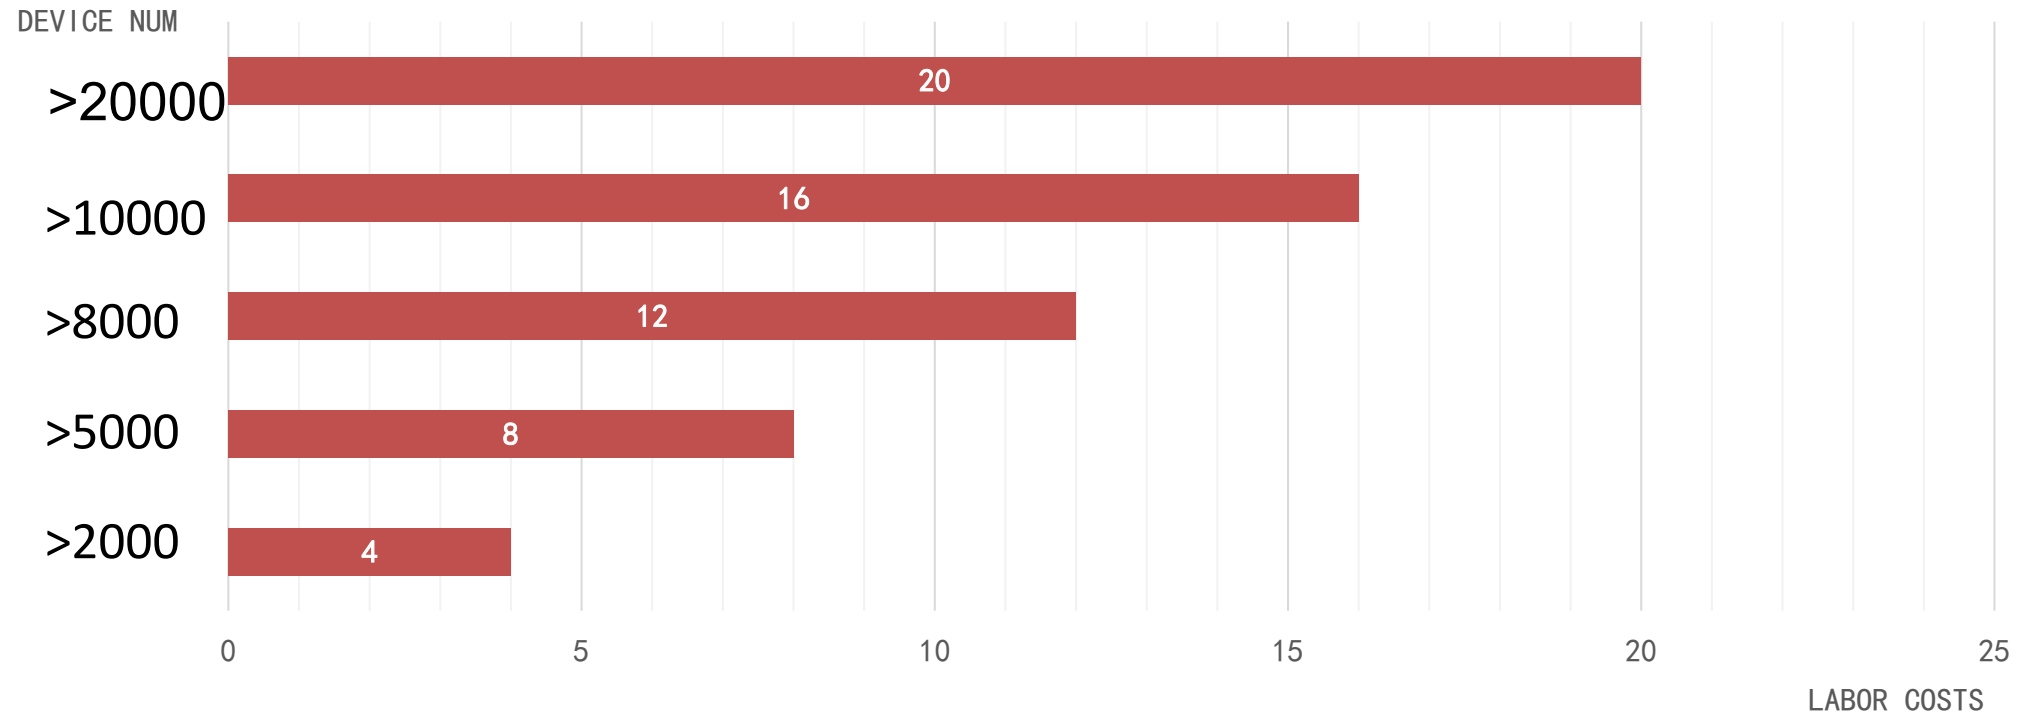

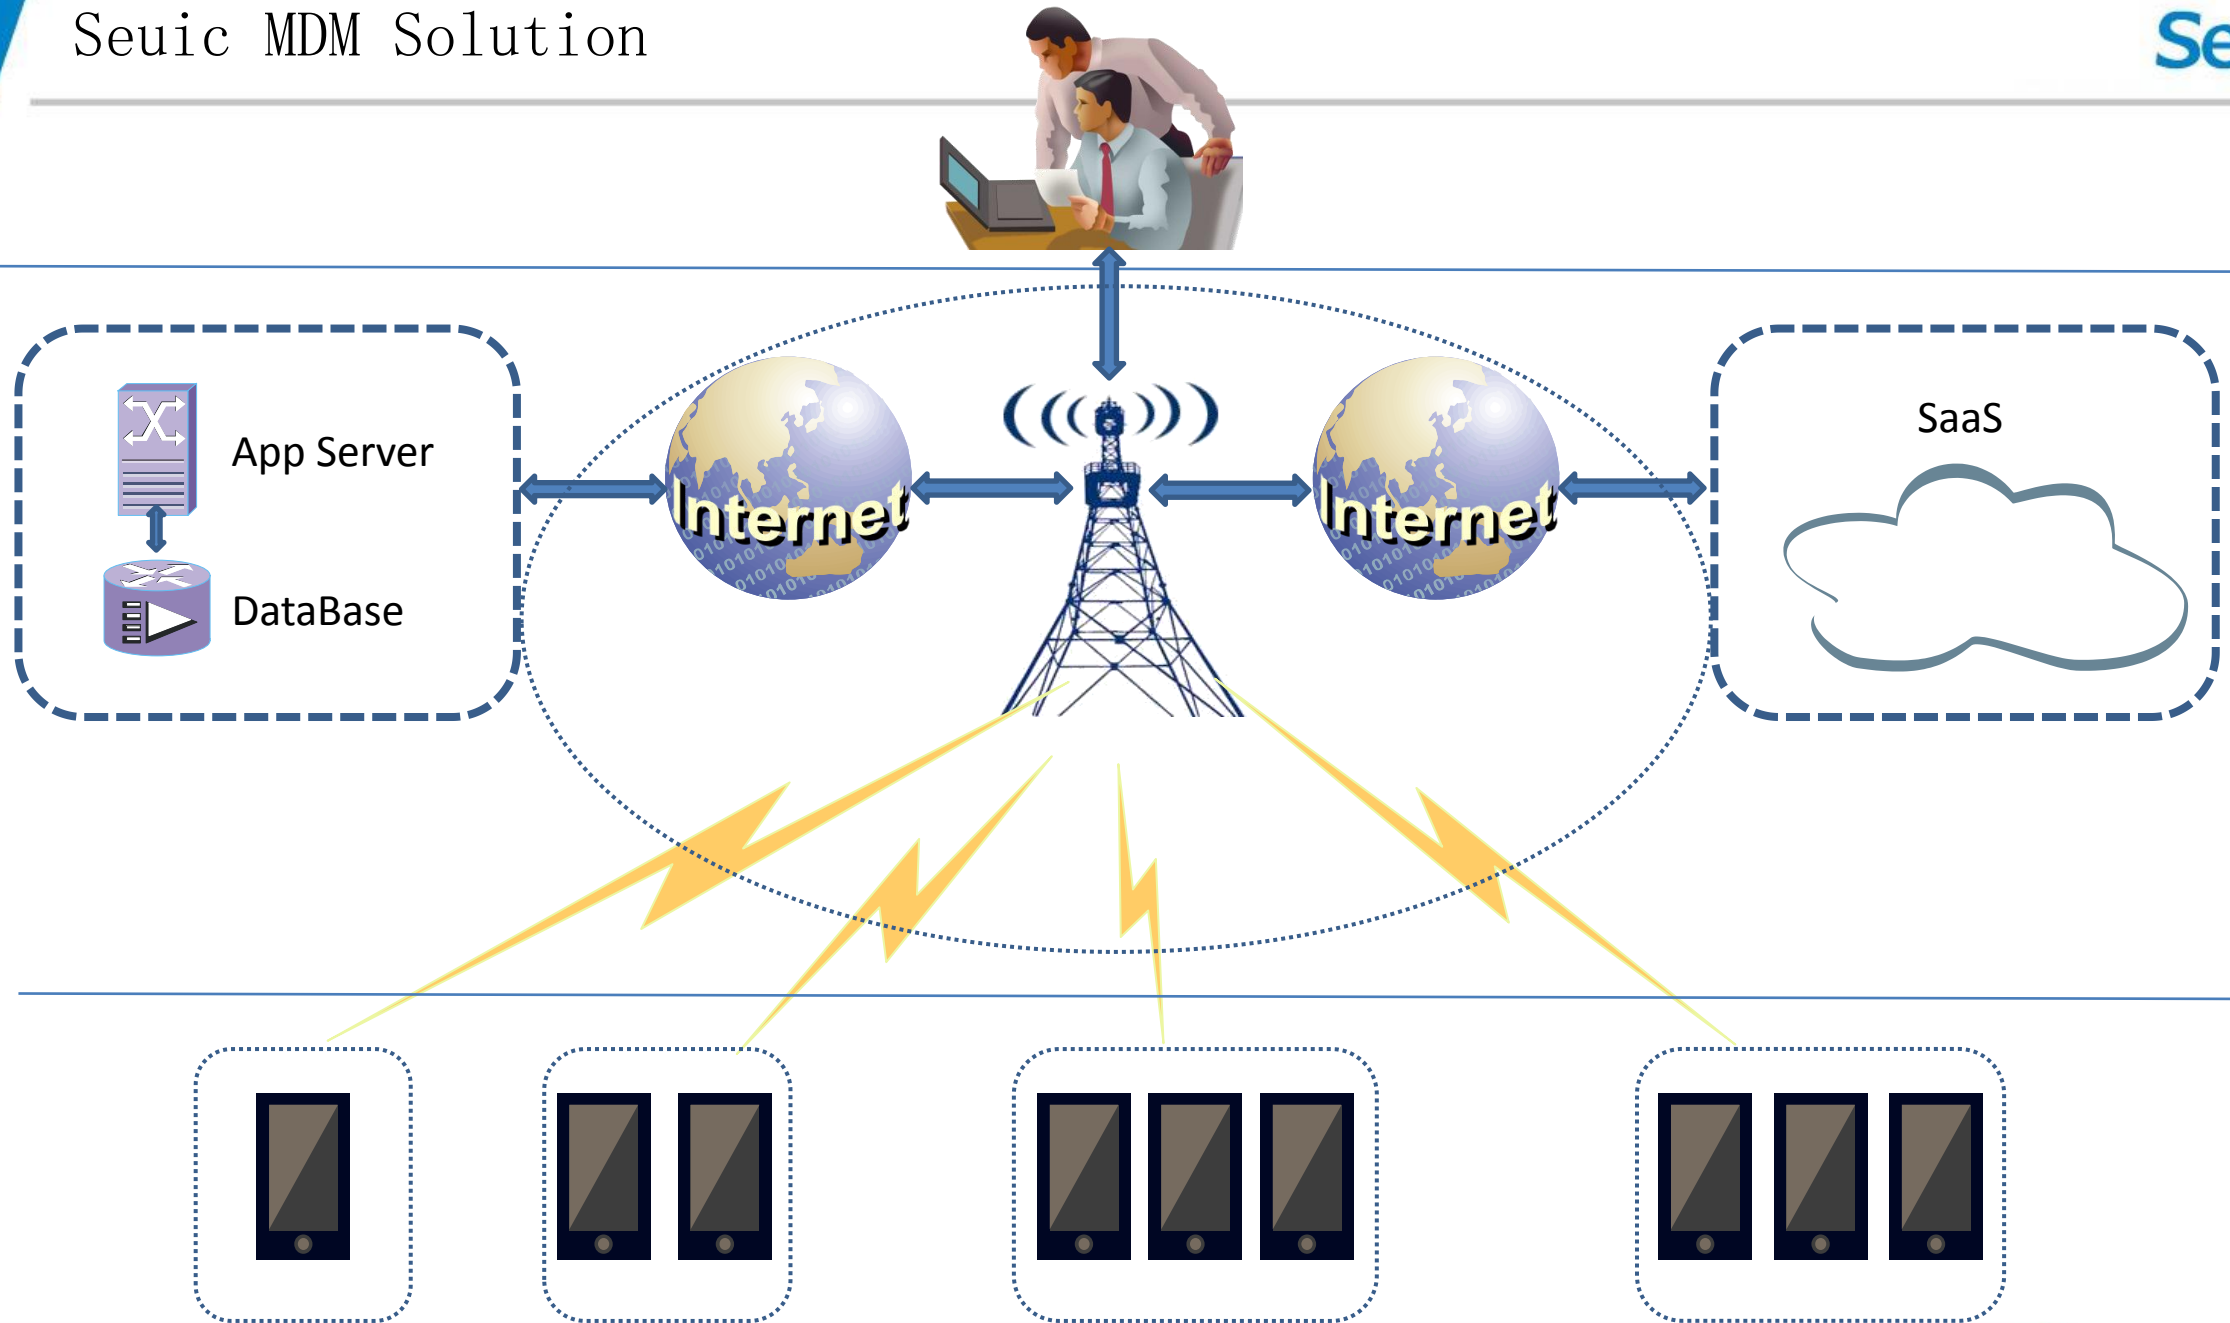

With the continues growth of business, more and more devices are applied in different places. How to have a centralized management of all the devices, like running status monitoring, standard config, quick app development, etc.?

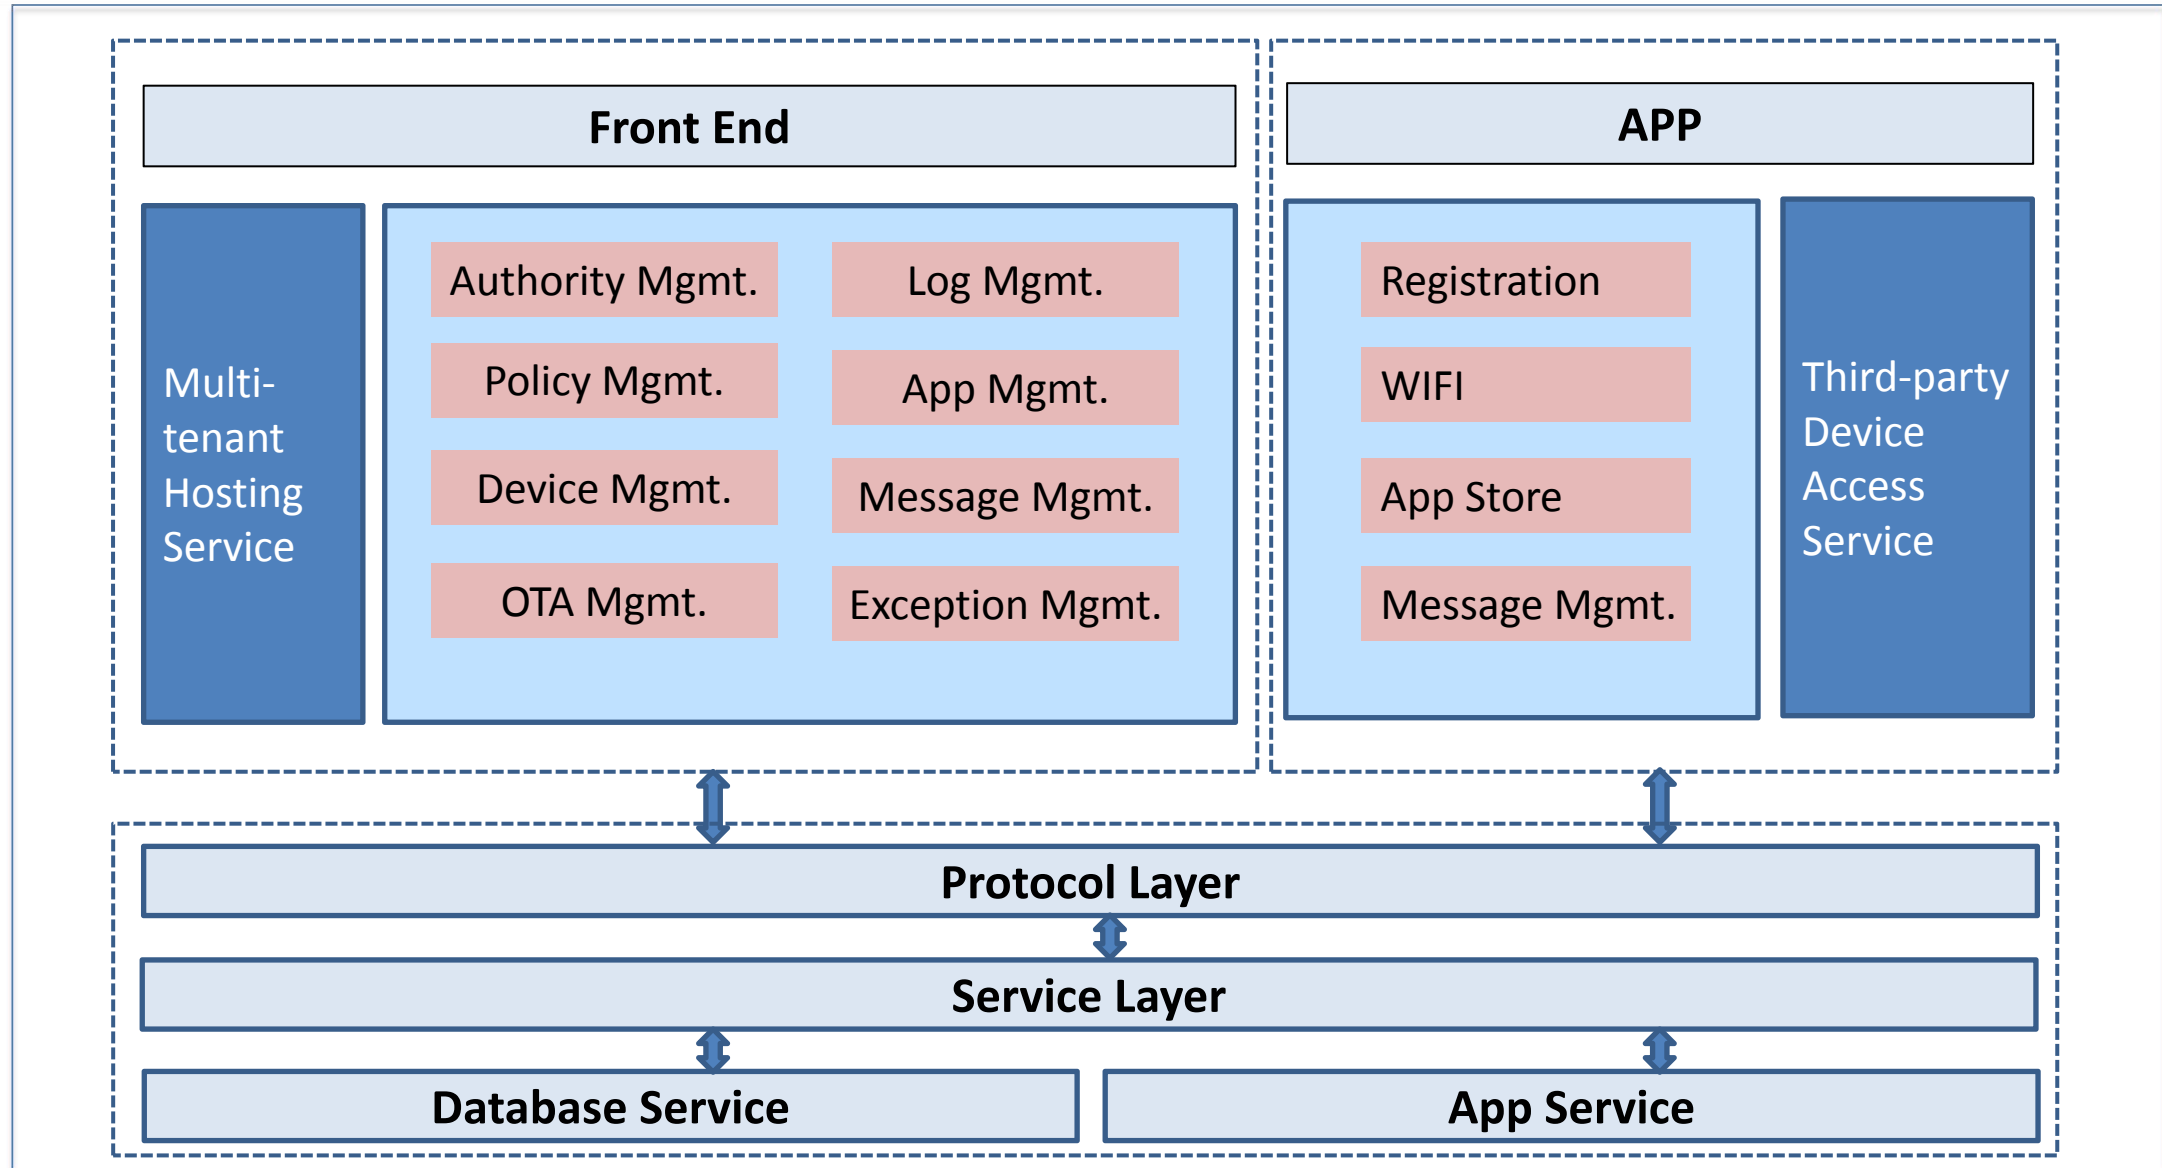

- How to manage all the devices centrally?
- How to increase the efficiency of device use?
- How to monitor the running status?
- How to deploy config and app once?
- How to locate the lost device?
- How to restrict the functions of the device?
- How to find the error and take corresponding measures?
